

**** Task group: Information Security ****

Context

Information Disclosure happens every day. Google is a very nice search engine for finding information which shouldn't be public. Google uses 'dorks' for making your search query more efficient, e.g. *site:*, *inurl:*, *filetype:*. E.g. a google dork for finding passwords in excel files use: "login: *" "password: *" filetype: xls

Hint: use the Google Hacking Database (GHDB): <https://www.exploit-db.com/google-hacking-database/>

Deliverables

- Show that your security portfolio contains at least 3 Google dorks.

Tasks

Use google dorks for finding

- Credit cards dumps
- MySQL dumps
- Video camera's
- Files containing passwords
- 'My Documents' folders
- What are YOU interested in?
